

Certificate MANAGEMENT

The **certificate management** option lets you verify the VPN tunnel security. Moreover it is possible to issue compliance **certificates for external authorities**.

NEXT Generation VPN

Now you can import all your Active Directory or LDAP users into Endian VPN with a few clicks of the mouse! Unified authentication allows you to tie Endian into your **central authentication for both SSL and IPSec VPN**.

Through simple **rule and role – based settings** you can manage the users **authentication** by generating granular policies for single users or groups. The encrypted tunnel protects the communication and data flow.

REPORTING

The best way to show your customers Endian's performances?

The brand new **Reporting** module provides **detailed reports**. You can select them by **time period** or **event category**, for any appliance functionality.

Live Network Monitoring

To know = To protect.

Thanks to this module it is now possible to see what is happening in your network in **real-time** (without losing the **historic data**). If you are able to visualize the events as they are happening, then you can take quick action to intervene and/or recover should an issue arise.

Application Control

64% of employees use Internet for personal purposes during working hours. The most used applications? **Skype, Facebook, Spotify and WhatsApp**. Thanks to nDPI (which recognizes more than **160 protocols**) you can block all the business inappropriate applications.

HOTSPOT

Cyclic Tickets

What about limiting your users web surfing to a predefined **data flow** or just to **one hour a day**, for a time span, (**daily, weekly, monthly**) without issuing tickets again and again? This feature makes it possible.

SmartLogin

Endian **Hotspot** is able to **recognize a device even after its first authentication**, according to the policy set up by the administrator. Make your Hotspot users happy by making their life easier!

...What's more:

- Improved and extended support for iOS and Android devices
- The **new GUI** speaks Italian, English, German, Japanese, Spanish, Portuguese, Chinese, Russian and Turkish

Next Generation VPN Group Management

VPN users can be arranged into **groups** to allow selected **access** to **different zones** within the **same enterprise network**. Group membership can be granted by editing users' accounts or by creating new groups and adding users to them.

How to do it?

- Go to *VPN > Authentication*
- (OPT1) Go to *Users* and edit an account, assigning membership to each group
- (OPT2) Go to *Groups* and edit a group, adding users to it.

VPN & LDAP

With Endian 3.0, **authentication** of **VPN users** can be done from one or more external **LDAP servers**.

How to do it?

- Go to *VPN > Authentication > Settings*
- Click on *Add new authentication server*
- Fill in the form with the required data of the LDAP server

Hotspot

Cyclic Tickets

Cyclic Tickets allow administrators to **give to Hotspot users a predefined amount of traffic** (time- or data- based) **within a given cycle of time** (e.g. a week or a month).

To create a new cyclic ticket:

- Go to *Hotspot > Administration interface > Tickets*.
- Click on *Add rate*
- Set the rate type to **cyclic** and complete the form like for any other ticket
- Add the ticket to a user

SmartLogin

SmartLogin is a cookie-based solution to **allow Hotspot users to access the Internet** without having to **re-enter their username and password every time**.

How to do it?

- Go to *Hotspot > Administration Interface > Settings > SmartConnect*
- Click on the *SmartLogin* checkbox, then click on *save*
- (OPT) Click on the *Allow users [...]* checkbox to let users choose whether to use SmartLogin or not

RADIUS Server

An external **RADIUS server** can now be used not only for the **Hotspot's accounting tasks**, but also for the **users' authentication**

- Go to *Hotspot > Hotspot settings*
- Click on the *Use External Authentication* checkbox at the bottom of the page
- Select **RADIUS** from the drop-down menu that appears below and fill in the form with the necessary parameters

Application Control

This kind of firewall allows you to **filter outgoing traffic on an application-basis** (instead of IP- and port-basis).

Want to block Spotify?

- Go to *Firewall > Outgoing Firewall*.
- Click on *Add a new firewall rule*.
- Fill in the various fields and choose **Spotify** from the *Application* drop-down menu.

Reporting

Through intuitive graphics, the all-new **Endian reporting GUI** shows **all the events that take place in your network in realtime**.

Want to have a look?

- Go to *Logs and Reporting > Dashboard*
- Click on the top left gear icon 
- Select an interval among those available
- (OPT) Tweak the interval using the slider below the graph
- (OPT) Select the types of event from the box below the graph
